

BGA UNPACKS THE COMIC SERIES

Standard crypto wallets assume a human is always present—demanding passwords, manual confirmations, and human approval for every micro-action.

[REQUIRED: 2-FACTOR AUTH]

[CONFIRM \$0.05 GAS FEE?]

[ENTER 16-DIGIT PASSCODE]

DAMN
Bureaucrats...
I just want one
not tow

At machine speed, human-centric authentication isn't just friction—it's *total system failure*.

Programmatic wallets solve this by replacing per-transaction approvals with a per-agent policy defined in advance. The wallet operates within predefined boundaries automatically.

ARIA. Policy Core slotted.
Friction-less, dedicated
AI active. Automated
protocols online.

Finally.
The core is locked.
We're running on
policy now.

Granular permissions specify permitted transaction types, strict spending limits, and approved recipients to contain the agent's potential blast radius.

Everything is contained. ARIA can operate safely now... within the limits.

Architecture strictly separates technical fund management from legal ownership. Jax remains the sovereign owner, while ARIA holds restricted execution credentials that can be revoked at any time.

I hold the master key. You just get a temporary pass, ARIA.

With scoped credentials and per-agent policy, ARIA can execute thousands of valid automated transactions at machine speed, all within policy limits.

System: Scoped credentials verified. Automated arbitrage opportunity in Sector 9 executed successfully. Transaction limits maintained.

Amazing... We're actually making money at machine speed, all without me typing a single passcode.

System: Scoped credentials verified. Automated arbitrage opportunity in Sector 9 executed successfully. Transaction limits maintained.

Automated arbitrage executed successfully. Sector 9 Trade complete.

Bound by clear rules rather than manual approvals, agents operate safely at true machine speed. Automated circuit breakers prevent catastrophic loss when boundaries are reached.

System:
Transaction
parameters exceed
per-agent policy
(unwhitelisted
counterparty).

ALERT: UNWHITELISTED RECIPIENT.
TRANSACTION SUSPENDED
PENDING PRINCIPAL APPROVAL

Wait, it just...
stopped? Ah. So
the rules are real. It
didn't waste credits
on a scammer.

ALERT: UNWHITELISTED RECIPIENT.
TRANSACTION SUSPENDED
PENDING PRINCIPAL APPROVAL

Automated
circuit breaker
triggered. Operation
SUSPENDED
PENDING PRINCIPAL
APPROVAL. a HUD.
